

Panasonic

VENTILATION AND IAQ SOLUTIONS

AWARD WINNING COMMITMENT TO INNOVATION

Our long history of industry accolades continues. The Environmental Protection Agency recognized Panasonic with the 2020 ENERGY STAR® Partner of the Year Sustained Excellence award, which demonstrates exemplary commitment to leadership in energy efficiency and the ENERGY STAR® program.

WITH GREAT POWER COMES GREAT VENTILATION AND HEALTHY LIVING

Panasonic ventilation fans give you the power. The power to easily remove unhealthy air and meet code. The power to reduce callbacks and build your reputation. The power to build healthy homes that guarantee customer satisfaction.

As part of our mission to promote clean indoor air and healthy homebuilding, Panasonic ventilation fans are built for power, brute strength, and the ability to move air more effectively.

That's why we engineer our fans to perform beyond the minimum 0.1" and 0.25" static pressure benchmarks. Panasonic ECM-motored models are the only HVI-certified ventilation fans on the market that overcome static pressure at the True Flow rating 0.375" level, more common on typical installations. The result? Optimum CFM output that expels unhealthy air and moisture, regardless of complicated duct runs.

With the power of Panasonic IAQ solutions, creating healthy homes and healthy families is easier than you think.

The Power of Panasonic

Rely on a higher power

Panasonic ventilation fans give you the power to virtually eliminate all your problems associated with under-performing ventilation. The power to remove unhealthy air and meet code on every project. The power to reduce callbacks and guarantee customer satisfaction. Most importantly, the power to build healthy homes that make healthy living a reality.

Ensure code compliance

Reduce callbacks

Simplify design & installation

Guarantee customer satisfaction

Understanding the importance of power rating

To move contaminated air and moisture out of the home effectively, high-powered ventilation is essential. Panasonic ventilation fans deliver incomparable air-moving power as tested and verified in real-world settings.

Panasonic fans are engineered to perform beyond the minimum 0.1" and 0.25" static pressure benchmarks, despite complicated duct runs. Our ECM-motored fans provide powerful CFM output and overcome static pressure at the 0.375" level more common on typical installations.

Did you know?

In field tests conducted by Lawrence Berkeley National Laboratory, nearly half of all installed ventilation fans fail the required airflow standards outlined in ASHRAE 62.2, despite their advertised CFM.

When you install a Panasonic ventilation fan you get the promised **CFM power rating** as listed on the box.

Certified & Code Compliant

Panasonic ventilation fans are certified by the Home Ventilating Institute (HVI) and ENERGY STAR® certified, where guidelines exist. All models can be used to comply with ASHRAE 62.2, the ventilation standard required by LEED for Homes, ENERGY STAR® for Homes 3.2, Indoor airPlus, CALGreen, NAHB Green Building Standard, EarthCraft, Washington Energy Code and other building programs.

Commitment to Indoor Air Quality & Healthy Homes

Panasonic is a member of the Indoor Air Quality Association (IAQA). We are proud to join an organization that shares a belief we care about: providing good indoor air quality to consumers through our products and systems. As an IAQA member, we commit to uphold industry standards and guidelines to deliver products that remove contaminated air and improve indoor air quality for healthier homes.

Powerfully quiet

Panasonic ventilation fans not only deliver the highest power rating to effectively remove air impurities from your home, they offer whisper-quiet operation so you'll barely know its on.

Long Life

Permanently lubricated motors are engineered for trouble-free, continuous operation for 30,000 hours on AC motors, and upwards of 60,000 hours on DC (ECM) motors, along with rust-proof paint and galvanized housing.

Easy Installation

Integrated duct adapters, adjustable mounting brackets (up to 24" o.c.), fan/motor units that easily detach from the housing and uncomplicated wiring all lend to user-friendly installation. Double-hanger bar systems allow for ideal positioning. Flex-Z Fast™ single-hinged bracket provides flexible, fast and easy installation on select models.

Energy Savings

When it comes to energy efficiency, our wattage requirements are among the lowest in the industry. Our fans have also been engineered to comply with ENERGY STAR® 4.0 requirements for increased efficiency (CFM/Watt), ensuring low cost, energy efficient operation.

Safety

WhisperGreen® Select™ models are protected by UL Class 2 Power Unit while all other models are equipped with thermal fuse protection. With the exception of the ERV's and fan/heaters, all models are UL listed for tub/shower enclosure when GFCI protected.

Airflow

A built-in plastic or metal damper (depending on model #) in all ceiling-mounted models helps prevent backdraft. Built-in metal flange provides blocking for penetrations through drywall as an air barrier, and assists with the decrease in leakage in the building envelope during blower door testing.

Lighting

Most of our models feature LED lighting that is ENERGY STAR® 2.0 certified and JA8 compliant for CA Title 24. They have 50,000 hours of rated life, along with an integrated <1W LED night light. The remaining fan/lights feature ENERGY STAR® rated compact fluorescent lamps (CFLs) and have 10,000 hours of rated life. The CFL lighted models feature the highest Lumens Per Watt in the industry at >70LPW; and incorporate a 4W night light.

Green Manufacturing

All fan only models are RoHS Approved. Restriction of Hazardous Substances Directive (RoHS) restricts the use of the following six substances in the manufacturing process: Lead, Mercury, Cadmium, Hexavalent chromium [CR(VI)], Polybrominated biphenyls (PBB), and Polybrominated diphenyl ether (PBDE).

Warranty

6-Year warranty on ECM motors, 5-Year warranty on LED's, 3-Year warranty on AC motors, CFLs and all other parts.

Note: All our ventilation fans are UL listed for tub/shower enclosure when GFCI protected except for WhisperFresh Select, Intelli-Balance 100, WhisperLine, WhisperComfort and WhisperWarm fans.

Why is Ventilation Necessary?

Today's homes are designed and built to improve energy efficiency. However, these airtight homes may actually cause health problems due to the build-up of pollutants and uncirculated stale air. What do they need? Mechanical ventilation!

Airtight Homes

Homes designed and built in recent years are more airtight and energy efficient than in the past. To obtain this airtight design, newly designed windows and doors, sealing caulks and other insulating materials are used to create better energy efficiency. The resulting benefit is fewer drafts, which lowers the cost to heat and air-condition a home. But pollutants retained in airtight buildings can be hazardous to their occupants. That's why Panasonic stresses a "build tight and ventilate right" platform. Proper mechanical ventilation design can address poor indoor air quality, while retaining energy efficiency.

Biological Pollutants

Biological pollutants, to some degree, are found in all homes. These include mold, mildew, pollen, dust mites, pet dander, viruses and bacteria. Accumulation of these biological pollutants can result in hazardous health effects for the occupants, as well as structural damage to the building.

Volatile Organic Compounds (VOCs)

Volatile Organic Compounds are carbon-based compounds that easily evaporate.

Formaldehyde and other types of gases are released from building materials, carpets, furniture and many other household items as part of aging, decomposition or curing, all of which are natural processes known as off-gassing. Some other household items that emit VOCs include hair sprays, paints, lacquers, finishes, oven cleaners and other cleaning solvents, pesticides, etc. Often colorless and odorless, VOCs can ultimately sensitize certain people to react to them.

Ways to Improve Indoor Air Quality

The first step to improve indoor air quality should be to reduce or remove the source of the pollutants.

Unfortunately, indoor pollutants are virtually impossible to eliminate completely, creating the need for a second step to improve indoor air quality—mechanical ventilation. Mechanical ventilation is used to remove stale, moist, polluted air and replace it with fresh outside air.

Whole House Ventilation

All homes need to exhaust stale air and bring in fresh air for the health of the occupants. To meet Whole House Ventilation Standards, a typical solution is to exhaust air on a low, continuous basis and allow outdoor infiltration air to freshen the home. However, it is also possible to mechanically bring in fresh air for Whole House Ventilation by running a fan at a higher speed on an intermittent basis. Either way, continuous or intermittent, it is important to insure fresh air routinely replaces the stale air within the home.

Bad

Pollutants such as smoke, formaldehyde, dust, humidity and VOCs accumulate in a poorly vented building.

Good

Ventilation fans help to maintain indoor airflow and air quality.

Ideally, an airtight home designed with both continuous and intermittent ventilation will contribute to a healthy and comfortable living environment for the entire family.

Local, or Source, Ventilation

Local, or source ventilation, sometimes referred to as spot ventilation, is used to capture and remove pollutants quickly at the source. Pockets of excessive moisture and pollutants can build up in the bathroom, kitchen, utility room, garage and home office. This secondary process serves to exhaust these problem areas quickly, before bad air can spread throughout the house. Just as important as Whole House ventilation, source ventilation complements the effort to improve indoor air quality.

Both systems exhaust pollutants from the air, but source ventilation is especially effective at removing pollutants where they can become concentrated such as in the bathroom, kitchen or garage.

Source (spot) ventilation:

The American Society of Heating, Refrigeration and Air Conditioning Engineers (ASHRAE) recommends the following minimums for source ventilation: (See ASHRAE on page 82)

- I. Bathrooms - 50 CFM minimum.
A good rule of thumb for bathrooms is 1 CFM/sq.ft.
- II. Kitchens - 100 CFM. A good rule of thumb for kitchens is 2 CFM/sq.ft.

Whole house ventilation:

Most building codes have adopted the American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE) Standard 62. The most widely-used version, ASHRAE 62.2-2016, calls for continuous

mechanical ventilation as shown in the following steps below.

The formula for calculating the needed whole house mechanical ventilation is as follows:

$CFM\ Fan = 0.03 A\ floor + 7.5\ (Number\ of\ bedrooms + 1)$

7.5 CFM/bedroom plus 7.5 CFM (assuming 2 people in the Master Bedroom) and add 1% of the square feet of the house or apartment.

Finally, it would be good to calculate the Equivalent Duct Length of the planned duct run. Bear in mind that some fans are not able to overcome the static pressure of a long, or difficult duct run to the exterior.

Static pressure and duct run:

A ventilating fan must overcome resistance when pulling air through the grille and pushing it through the duct and cap to the outside of the building. This resistance is known as static pressure. The amount of static pressure depends on the duct length, type of duct, elbows and the roof jack or wall cap.

Fan Selection Guide

1. What is the size of the bathroom?
 - a. Need 1 CFM (cubic foot per minute) per square foot
 - b. Length x Width of floor space (sq.ft.) = CFM (length) x (width) = (Total CFM needed)
 - c. Example: 8 ft length x 10 ft wide = 80 CFM is needed to properly ventilate the bathroom
2. What features are needed/wanted?
Fan only? Light? Heat? Variable speed? Motion? Humidity? Time delay?
3. What type of access or truss height is available?
 - a. 2 x 8 construction – use any fan combination that we have
 - b. 2 x 6 construction – use our fan combinations that fit 2 x 6 or 2 x 4 construction
 - c. 2 x 4 construction – use our fan combinations that fit 2 x 4 construction

Now that you know the CFM needed, the features wanted and the construction size, you are ready to find your fan combination.

Powerful Ventilation & IAQ Solutions

WhisperRecessed LED™

Ideal Design Solution

- Architectural grade recessed fan/light
- ENERGY STAR® 2.1 certified LED lamp

WhisperFit EZ™

Ideal Retrofit Solution

- Low profile, 5-5/8" housing depth
- Pick-A-Flow™ airflow selector

WhisperWarm™

Quiet, Fan/Heater Solution

- Quick, 1 minute warm up

ecovent™

Cost effective, Spot Ventilation Solution

- Ideal for home builders
- Ventilation verification assurance

WhisperFreshSelect™

Fresh Air Supply Fan Solution

- ECM motor with Pick-A-Flow™ airflow dial
- Balanced ventilation solution with WhisperGreen Select® or SelectCycler™

WhisperComfort™

Low Cost and Easy to Install Balanced Air Solution

- UL listed ceiling and wall mount spot ERV

Intelli-Balance™ 100

Cost Effective, Code Compliant ERV for Any Climate Zone

- Two ECM motors with Pick-A-Flow™
- Built-in ASHRAE 62.2 timing function

SelectCycler™

Lowest Cost Per HERS Point Solution

- Supply or balanced ventilation
- Designed to work with WhisperGreen Select fans

WhisperLine™

Remote Mount, In-line Spot Ventilation Solution

- Remote mount in-line fans for single or multiple inlets

WhisperValue[®] DC™

Ideal Multi-Family Solution

- ECM motor and Pick-A-Flow™ airflow selector
- Super low profile, 3-3/8" housing depth
- UL listed ceiling and wall mount

WhisperGreen[®] Select™

One Fan - Multiple IAQ Solutions

- Customizable, all-in-one fan and fan/LED light combinations
- ECM Motor with Pick-A-Flow™ airflow selector
- Works with the SelectCycler system

WhisperWall[®]

Through the Wall Spot Ventilation

- Through-the-wall application

Recessed Inlet™

Design solution for exhaust or supply inlets

- Ideal for use with in-line fans and H/ERVs
- ENERGY STAR® 2.0 certified LED lamp fans

WhisperCeiling[®] DC™

Precision Spot Ventilation Solution

- ECM motor with Pick-A-Flow™ airflow selector

WhisperSense[®] DC™

Moisture Control for CALGreen Compliance Solution

- ECM Motor with Pick-A-Flow™ airflow selector
- Built-in dual motion and humidity sensors

WhisperControl

Condensation Sensor Plus Solution

- Automatic dual humidity and temperature sensor

One Fan – Multiple IAQ Solutions

WhisperGreen® Select™ assures you'll easily meet code on every project. **Field testing shows that 0.375" static pressure more accurately represents a typical installation. While most fans don't have the power to overcome the 0.375" level, WhisperGreen® Select™ is purposely engineered for it.**

Panasonic brings you the next wave of technological innovation, with a built-in **Pick-A-Flow™** airflow selector that provides the unique ability to select your required airflow (50-80-110 and 110-130-150 CFM models) with the simple flip of a switch.

WhisperGreen Select also offers a unique set of three patented **Plug 'N Play™** modules that allow you to further customize your fan.

Multi-Speed with Time Delay* (FV-VS15VK1)

Allows you to select the proper CFM settings to satisfy ASHRAE 62.2 continuous ventilation requirements. The fan runs continuously at a preset lower level (0, 30-100 or 0, 50-120 CFM, in 10 CFM increments), then elevates to a maximum level of operation (50-80-110 or 110-130-150 CFM) when the wall switch is turned on, or when the Motion Sensor or Condensation Sensor module is activated. A High/Low delay timer returns the fan to the preset CFM level after a period of time set by the user.

*Applies to both the pre-installed multi-speed with time delay, as well as the FV-VS15VK1 multi-speed with time delay Plug 'N Play module.

SmartAction® Motion Sensor (FV-MSVK1)

Automatically activates the fan when someone enters the room. Once the settings have been applied, the fan becomes truly automatic. This module also activates a 20 minute delay off timer for the fan.

Condensation Sensor (FV-CSVK1)

Helps control bathroom condensation to prevent mold and mildew. Sensor technology detects relative humidity and temperature to anticipate dew point, automatically turning the fan on to control humidity. Built-in Relative Humidity (RH) sensitivity adjustment (from 30%-80%) enables fine tuning for moist conditions and for satisfying CALGreen requirements. When the Condensation Sensor is used in conjunction with multi-speed functionality, the fan will ramp up to high speed when the Condensation Sensor detects moisture in the room. This module also activates a 20 minute delay off timer for the fan.

FV-0511VKSL2 30 to 110 CFM 4" or 6" Duct

FV-0511VKSL2

HEALTHY AIR, HEALTHY HOME

HVI-certified True Flow ratings at **0.375"** static pressure provide powerful CFM output to assure code compliant, healthy homes.

LED Lighting

INCLUDES: 10 Watt dimmable LED chip panel/3000 Kelvin Warm White/90CRI/700 lumens/70 LPW/ENERGY STAR® 2.2 certified/JA8 compliant for CA Title 24/50,000 hours rated average life/<1W LED night light.

APPLICABLE TO
FV-0511VKSL2 ONLY

BUILT-IN SELF ADJUSTING
AIRFLOW CAPABILITY

*Industry research indicates static pressure in typical installations ranges from 0.20" to 0.375".

FV-0511VKL2 50-80-110 CFM 4" or 6" Duct
FV-1115VKL2 110-130-150 CFM 6" Duct

WhisperGreen Select Key Benefits:

- Precision, whole-house ventilation solution ideal for use in the bathroom, laundry room, sun room, basement or garage
- Pick-A-Flow™ airflow selector (50-80-110 or 110-130-150 CFM models) combined with SmartFlow™ technology simplifies the selection process and ensures optimum performance to meet code and reduce callbacks
- Plug 'N Play modules provide up to three value-added features
- Can be used to comply with ASHRAE 62.2, LEED, CALGreen, Indoor airPlus, California Title 24, WA Energy Code and all Energy Star for Homes programs
- Incorporates a 10W dimmable LED chip panel with <1W LED night light, JA8 compliant for CA Title 24
- Elegant grille design
- Single-hinged Flex-Z Fast™ bracket provides flexible, fast and easy installation
- Environmentally friendly 26 gauge housing using Zinc-Aluminum-Magnesium (ZAM) coating
- Dual access junction box

WhisperFresh[®] Select
VENTILATION FAN

[FV-15NLS1]

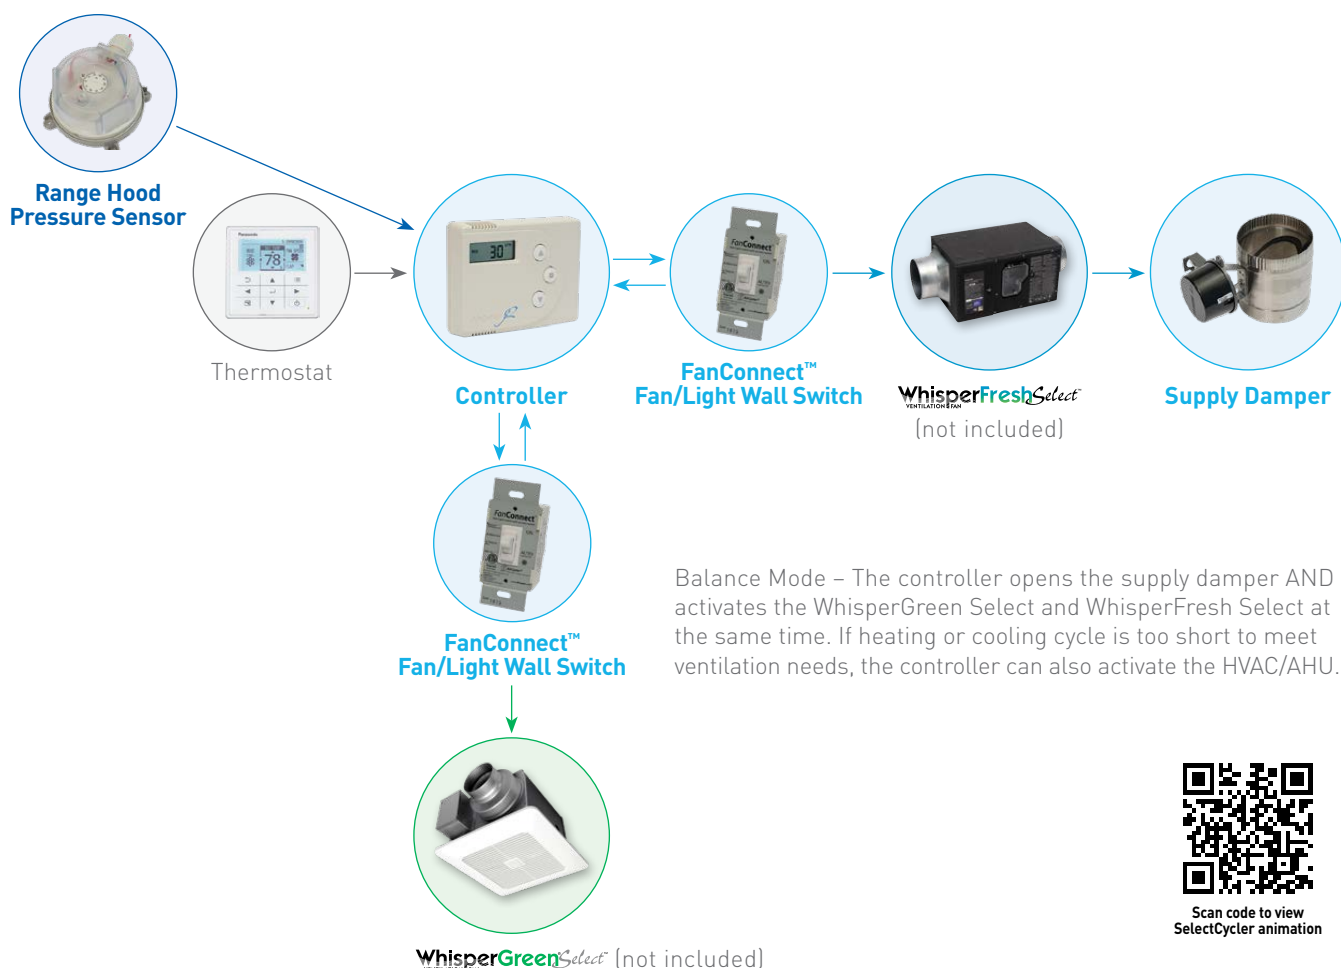

**Other WhisperGreen Select fan and fan/light models are available for use with this system*

Low Cost, Whole House Ventilation Solution

The SelectCycler™ System is a cost effective, whole house ventilation solution for ASHRAE 62.2 compliance. By combining the best parts of both central fan integrated ventilation (typically forced air HVAC/AHU) and exhaust fan ventilation, the SelectCycler System provides the ultimate energy efficient ventilation solution.

SelectCycler System at a Glance

Scan code to view SelectCycler animation

WhisperGreen Select Provides Customizable Airflow

Pick-A-Flow
Airflow Selector
Switch

The SelectCycler System was designed exclusively to work with WhisperGreen Select fans, which incorporate Pick-A-Flow™ adjustable CFM technology for optimal use in Balanced mode.

WhisperGreen Select features an ultra-quiet ECM motor that incorporates intelligent SmartFlow™ technology, so it automatically adjusts its speed to ensure optimal CFM output, even in the case of a complicated duct run.

I Low Cost, Whole House Ventilation Solution

Controller, Supply Damper & FanConnect™ Wall Switch Kit

SACG2K-04/06/08/10 4", 6", 8" or 10" Duct Options

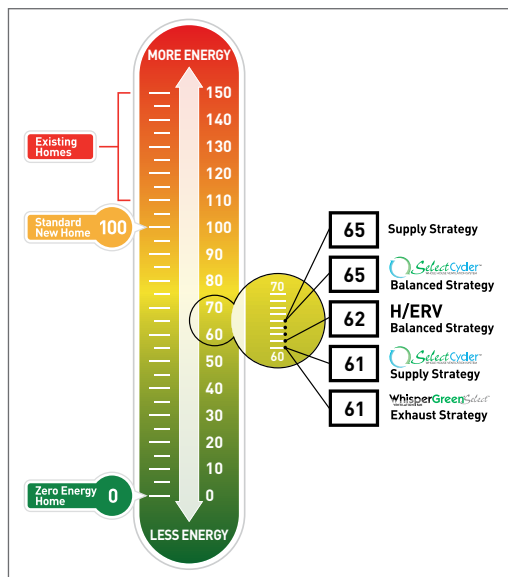

SelectCycler Key Benefits:

- Ideal for single and multi-family construction
- Provides whole house ventilation control that's integrated into the home's Central HVAC system
- Durable, powered open/close damper alleviates damper chatter
- Controls WhisperGreen® Select™ (or any 110VAC ventilation fan), to provide supplemental ventilation as needed to meet ASHRAE 62.2
- Two operational modes help a home achieve the lowest cost per HERS point for either supply or balanced ventilation strategies
- Works in tandem with spot exhaust fan to achieve hybrid supply or balanced ventilation
- Can be used in conjunction with WhisperFresh Select™ to create a wired, measurable balanced ventilation solution
- Features a patented setup process, including two simple options: Flow vs Time
- Digital display panel shows system status and aids in troubleshooting
- Fan/light wall switch can be programmed from the controller to provide a delay timer function

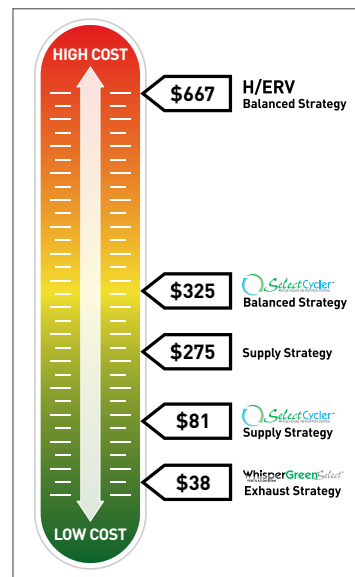

SelectCycler™ System offers the **most cost effective** solution for meeting ventilation code and minimizing the impact to your HERS Index.

HERS Index Per Ventilation Design Strategy*

WhisperGreen Select
ECM Motor and low watt consumption contribute to a low HERS Index Score and Cost Per HERS Point Index

Ventilation Cost Per HERS Point Index*

SelectCycler System **Balanced Mode**
Lowest cost per HERS point for **Balanced Ventilation**

SelectCycler System **Hybrid Mode**
Lowest cost per HERS point for **Supply Ventilation**

WhisperGreen® Select™
Lowest cost per HERS point for **Exhaust Ventilation**

*Modeling conducted by third-party RESNET Provider EPX/NRGLogic

SelectCycler Kit (SACG2K)

Programmable Wall Mounted Controller

- Ideal for single and multi-family construction
- Calculates supply duct and exhaust fan run cycles to meet ASHRAE 62.2
- Patented algorithm calculates operation time to meet ASHRAE 62.2 ventilation requirements
- Allows for programmable hours of operation
- Calculated flow or calculated time setup
- LCD display for system operation feedback and easy trouble shooting
- Communicates to the FanConnect wall switch to control the bathroom exhaust fan
- Operating Voltage: 24VAC (up to 30VAC max)
- Current Draw: 0.07 Amps

Motorized Supply Damper

- Stainless steel, power open/close damper
- Available in 4", 6", 8" or 10" duct size
- Operating Voltage: 24VAC (up to 30VAC max)
- Current Draw: 0.07 A idle; 0.125 A for 15 second damper transit time
- Power Draw (VA): >1W idle; 3W for 15 second damper transit time
- Wiring requirements: 19 gauge minimum
- Includes pigtail and damper for wiring
- Damper can be installed in any position

FanConnect™ Bathroom Fan/Light Wall Switch

- Compatible with single, or multi-speed fans, set to a single speed setting
- Light: 450 Watts @ 120VAC (blue wire)
- Fan: 150 Watts @ 120VAC (red wire)
- Operation: 120VAC +/- 10%

Optional Accessories

- The range hood pressure sensor works exclusively with the SelectCycler System to solve depressurization issues by allowing make up air to enter as soon as the range hood is turned on
- Hot and cold temperature sensors disable the fresh air damper in extreme temperatures

Range Hood Pressure Sensor (SACRR)

- Solves depressurization issues
- Max Operating Pressure -10kPa
- Pressure Range: 20 - 200 Pa +/-15%
- Operating Temperature: -40°C to 85°C
- Electrical Rating: 1.5A (1.4A) / 250V
- Mounting: Diaphragm in any vertical plane

Hot Temperature Sensor (SACTG-H01)

- System control in extreme hot climates
- OFF Temperature: 95°F +/- 5°
- ON Temperature: 4°F lower
- Operation: 2A @ 24VAC

Cold Temperature Sensor (SACTG-C02)

- System control in extreme cold climates
- OFF Temperature: 35°F +/- 5°
- ON Temperature: 4°F higher
- Operation: 2A @ 24VAC

WhisperSense[®] DC™ | Precision Spot Ventilation Solution, Moisture Control for

FV-0511VQC1 50-80-110 CFM 4" or 6" Duct

FV-0511VQC1

HEALTHY AIR HEALTHY HOME

HVI-certified True Flow ratings at **0.375"** static pressure provide powerful CFM output to assure code compliant, healthy homes.*

WhisperSense DC Key Benefits:

- Precision spot ventilation fans ideal for use in the bathroom, laundry room, mud room, basement or garage
- Pick-A-Flow™ airflow selector (50-80-110 CFM) combined with SmartFlow™ technology simplifies the selection process and ensures optimum performance to meet code and reduce callbacks
- Dual Sensor Technology (Motion & Moisture) provides built-in redundancy for the ultimate in automatic moisture and odor control
- Single-hinged Flex-Z Fast™ bracket provides flexible, fast and easy installation
- Elegant grille design compliments the aesthetics of any room
- Can be used to comply with ASHRAE 62.2, LEED, ENERGY STAR® Indoor airPlus, CALGreen, EarthCraft, CA Title 24 and WA Energy code

*Industry research indicates static pressure in typical installations ranges from 0.20" to 0.375".

WhisperFit[®] EZ™ | Automatic Spot Ventilation Solution

FV-08-11VFM5 80 or 110 CFM 4" or 3" Duct

WhisperFit EZ Key Benefits:

- Ideal for remodeling and hotel new construction or renovation
- SmartAction® Motion Sensor with 20 minute delay off timer
- Single-hinged Flex-Z Fast™ bracket provides flexible, fast and easy installation
- Detachable installation adapter provides even greater flexibility
- Low profile housing design fits in 2 x 6 construction
- 4" duct with 3" duct adapter included
- Can be used to comply with ASHRAE 62.2, LEED, Indoor airPlus, California Title 24 and WA Energy Code

Installation is as Easy as 1-2-3!

Insert single-hinged Flex-Z Fast™ installation bracket

Connect the wiring and attach duct to installation adapter

Install Fan

Flex-ZFast™

WhisperValue[®] DC™ | Precision Spot Ventilation Solution, Ideal for Multi-Family

FV-0810VSS1 80 or 100 CFM 4" Oval Duct
FV-0510VSC1 50-80-100 CFM 4" Oval Duct

Lowest profile,
perfect fit in a 2 x 4!
Lowest profile
ENERGY STAR[®] fan
available –
fits anywhere!

WhisperValue DC Key Benefits:

- Precision spot ventilation fan ideal for residential construction (single and multi-family) and manufactured homes
- Pick-A-Flow™ airflow selector combined with SmartFlow™ technology simplifies the selection process and ensures optimum performance to meet code and reduce callbacks
- FV-0810VSS1 incorporates Multi-Speed control with 20 minute time delay for ASHRAE 62.2 compliance
- FV-0510VSC1 features a built-in Condensation Sensor to control moisture in the bathroom for CALGreen compliance
- Unique L-Shaped bracket simplifies installation and provides strong support
- UL approved for ceiling or wall mount (actually fits in a 2 x 4 stud wall)
- Wall Installation reduces cost by eliminating the need to incorporate a radiation damper when penetrating fire rated ceilings, making it ideal for Multi-Family applications
- Can be used to comply with ASHRAE 62.2, LEED, Indoor airPlus, California Title 24, and WA Energy Code

WhisperCeiling® DC™ | Precision Spot Ventilation Solution

FV-0511VQ1 50-80-110 CFM 4" or 6" Duct
FV-1115VQ1 110-130-150 CFM 6" Duct

WhisperCeiling DC Key Benefits:

- Precision spot ventilation fans ideal for use in the bathroom, laundry room, sun room, basement or garage
- Pick-A-Flow™ airflow selector (50-80-110 or 110-130-150 CFM models) combined with SmartFlow™ technology simplifies the selection process and ensures optimum performance to meet code and reduce callbacks
- Single-hinged Flex-Z Fast™ bracket provides flexible, fast and easy installation
- Elegant grille design compliments the aesthetics of any room
- Can be used to comply with ASHRAE 62.2, LEED, ENERGY STAR®, Indoor airPlus, EarthCraft, CA Title 24 and WA Energy code

FV-0511VQ1

FV-1115VQ1

HEALTHY AIR, HEALTHY HOME

HVI-certified True Flow ratings at **0.375"** static pressure provide powerful CFM output to assure code compliant, healthy homes.*

*Industry research indicates static pressure in typical installations ranges from 0.20" to 0.375".

WhisperCeiling® | Quiet, Spot Ventilation Solution

FV-20VQ3 190 CFM 6" Duct
FV-30VQ3 290 CFM 6" Duct
FV-40VQ4* 390 CFM 6" Duct

WhisperCeiling Key Benefits:

- Large volume (190-390) CFM options designed for light commercial applications
- UL listed for tub/shower enclosure when GFCI protected
- Can be used to comply with ASHRAE 62.2, LEED, Indoor airPlus, EarthCraft, California Title 24 and WA Energy Code

*FV-40VQ4 does not comply with the ENERGY STAR® 4.0 requirement for increased efficiency (CFM/Watt).

HEALTHY AIR, HEALTHY HOME

HVI-certified True Flow ratings at **0.375"** static pressure provide powerful CFM output to assure code compliant, healthy homes.*

*Industry research indicates static pressure in typical installations ranges from 0.20" to 0.375".

WhisperValue DC Key Benefits:

- Precision spot ventilation fan ideal for ideal for residential construction (single and multi-family) and manufactured homes
- Pick-A-Flow™ airflow selector combined with SmartFlow™ technology simplifies the selection process and ensures optimum performance to meet code and reduce callbacks)
- UL approved for ceiling or wall mount – perfect fit in a 2 x 4 stud bay
- Wall installation eliminates the need and cost for a radiation damper
- Optional 24 gauge steel, fire code rated 4" oval to 3" round duct adapter, sold separately (Model # FV-VS43R)
- Can be used to comply with ASHRAE 62.2, LEED, Indoor airPlus, California Title 24 and WA Energy Code

Transfer Register Box

FV-JD

Transfer Register Box (TRB) – Room to Room Solution Key Benefits:

- Designed for use with the WhisperValue DC fan and fan/light combinations
- Perfect for room-to-room powered circulation in Multi-family projects with ductless heat pumps and mini splits
- Powered 50 CFM transfer at less than 0.3 sone (based on FV-0510VS1)
- 26 gauge steel, fire code rated accessory, sold separately as model #FV-JD
- No need for a radiation damper like on jump ducts
- Works with standard size HVAC registers – 4" x 10" HVAC supply grille
- Can be used to comply with ASHRAE 62.2, LEED for Homes, CALGreen and all Energy Star for Homes programs

*Must order in quantities of 4, shipment will contain 1 box with 4 units.

WhisperValue DC Fan & Transfer Register Box

*All fans and fan/lights sold separately.

WhisperFit^{EZ}™ | Ideal Retrofit Solution

FV-08-11VF5 80 or 110 CFM 4" or 3" Duct

WhisperFit EZ Key Benefits:

- Ideal for remodeling and hotel new construction or renovation
- Pick-A-Flow™ airflow selector – one fan, you choose the CFM (80 or 110)
- Single-hinged Flex-Z Fast™ bracket provides flexible, fast and easy installation
- Detachable installation adapter provides even greater flexibility
- Low profile housing design fits in 2 x 6 construction
- 4" duct with 3" duct adapter included
- Can be used to comply with ASHRAE 62.2, LEED, Indoor airPlus, California Title 24 and WA Energy Code

ecoVent[®] | Cost-effective, Spot Ventilation Solution

FV-07VBA1A + FV-07VBB1 4" Duct

FV-07VBA1A +
FV-07VBB1

HEALTHY AIR, HEALTHY HOME

HVI-certified True Flow ratings at **0.375"** static pressure provide powerful CFM output to assure code compliant, healthy homes.*

EcoVent Key Benefits:

- Ideal for new residential construction (High Performance / ENERGY STAR® Single Family Production Builders and Manufactured Housing)
- The most cost effective 90 CFM spot ventilation fan on the market.
- The only 2-speed 70/90 CFM spot ventilation fan on the market (assures code compliance)
- Delivers a True Flow rating of 56 CFM at 0.375" static pressure (when set at the 90 CFM setting)
- Most cost effective ENERGY STAR® solution for home and manufacturing builders
- Adjustable, two speed (70/90 CFM) spot ventilation solution
- Small grille design complements the aesthetics of your bathroom, powder room or laundry room
- Fits in 2 x 6 construction
- Available in contractor packs only – housing and motor/grille packaged separately reduces risk of parts being lost or damaged on site
- Can be used to comply with ASHRAE 62.2, LEED and all Energy Star for Homes programs

*Industry research indicates static pressure in typical installations ranges from 0.20" to 0.375".

THE ART AND DESIGN OF
SPOT
VENTILATION

Design Solution for Fan/Light Combinations

Combining performance and beauty, WhisperRecessed® LED™ incorporates a powerful yet quiet 80 CFM fan behind an elegant recessed LED light. Its stylish all-in-one design delivers the quietest, most efficient ENERGY STAR® certified recessed fan/light combo unit available. In fact, you'll only know it's working because of the clean, fresh air in your bathroom. WhisperRecessed® LED uses a warm white dimmable LED lamp.

Best of all, the environmentally friendly WhisperRecessed LED helps you comply with the industry's most stringent green building standards.

- **NEW!** Includes (1) replaceable, 8W ENERGY STAR 2.0 certified, GU24 base LED lamp, JA-8 compliant for CA Title 24 and Title 20
- ENERGY STAR® rated architectural grade recessed fan with dimmable LED light
- Quiet, energy efficient and powerful 80 CFM ventilation hidden above the ceiling
- Ideal for use in the bathroom, living room or laundry room
- Beautiful lighting with 6" aperture and advanced luminaire design

WhisperRecessed[®] LED[™] | Design Solution for Fan/Light Combinations

FV-08VRE2 80 CFM 4" or 6" Duct

New! More energy efficient
8 Watt lamp!

See Page 52 for Recessed Inlet, a light only option to match WhisperRecessed LED fan/light combinations.

WhisperRecessed LED Key Benefits:

- Quiet and powerful 80 CFM ventilation hidden above the ceiling
- **NEW!** Includes (1) replaceable, 8W ENERGY STAR 2.0 certified, GU24 base LED lamp, JA-8 compliant for CA Title 24 and Title 20
- Architectural grade recessed fan with dimmable LED light
- Ideal for use in the bathroom, living room or laundry room
- Beautiful lighting with 6" aperture and advanced luminaire design
- Integrated dual 4" or 6" duct adapter
- Fits in 2 x 8 construction
- Can be used to comply with ASHRAE 62.2, CALGreen*, LEED, Indoor airPlus, JA8 compliant for CA Title24 & Title20 and WA Energy Code

*Can be used to comply with CALGreen when controlled by the Panasonic Condensation Sensor Plus (See page 54).

WhisperCeiling[®] DC[™] | Precision Spot Ventilation Solution

FV-0511VQL1 50-80-110 CFM 4" or 6" Duct
FV-1115VQL1 110-130-150 CFM 6" Duct

WhisperCeiling DC Key Benefits:

- Precision spot ventilation fan/light ideal for use in the bathroom, laundry room, sun room, basement or garage
- Pick-A-Flow[™] airflow selector (50-80-110 or 110-130-150 CFM models) combined with SmartFlow[™] technology simplifies the selection process and ensures optimum performance to meet code and reduce callbacks
- Incorporates one 10W dimmable LED chip panel with <1W LED night light for warm, long-life energy efficient illumination (night light must be wired separately)
- Single-hinged Flex-Z Fast[™] bracket provides flexible, fast and easy installation
- Elegant grille design compliments the aesthetics of any room
- Can be used to comply with ASHRAE 62.2, LEED, ENERGY STAR[®], Indoor airPlus, EarthCraft, JA8 compliant for CA Title 24 and WA Energy code

WhisperValue[®] DC™ | Precision Spot Ventilation Solution, Ideal Multi-Family Fan/Light

FV-0510VSL1	50-80-100 CFM	4" Oval Duct
FV-0810VSSL1	80 or 100 CFM	4" Oval Duct
FV-0510VSCL1	50-80-100 CFM	4" Oval Duct

Lowest profile,
perfect fit in a 2 x 4!
Lowest profile
ENERGY STAR[®] fan
available –
fits anywhere!

WhisperValue DC Key Benefits*:

- Pick-A-Flow™ airflow selector combined with SmartFlow™ technology simplifies the selection process and ensures optimum performance to meet code and reduce callbacks
- FV-0810VSSL1 incorporates Multi-Speed Control with 20 minute time delay for ASHRAE 62.2 compliance
- FV-0510VSCL1 features a built-in Condensation Sensor to control moisture in the bathroom
- UL approved for ceiling or wall mount – actually fits in a 2 x 4 stud wall
- Incorporates one 10W dimmable LED chip panel with <1W LED night light for warm, energy efficient illumination (night light must be wired separately)
- Unique L-Shaped bracket simplifies installation and provides strong support
- UL approved for ceiling or wall mount (actually fits in a 2 x 4 stud wall)
- Wall Installation reduces cost by eliminating the need to incorporate a radiation damper when penetrating fire rated ceilings, making it ideal for Multi-Family applications
- Can be used to comply with ASHRAE 62.2, LEED, Indoor airPlus, JA8 compliant for CA Title 24, CALGreen4 and WA Energy Code

*Optional 4" oval to 3" round duct adapter (FV-VS43R) and Transfer Register Box (FV-JD) sold separately. See page 28-29 for details.

WhisperFit EZ™ | Ideal Retrofit Fan/Light Solution

FV-08-11VFL5E 80 or 110 CFM 4" or 3" Duct

(with 3" duct adapter)

WhisperFit EZ Key Benefits:

- Ideal for remodeling and hotel new construction or renovation
- Lighted model incorporates one 10W dimmable LED chip panel with <1W LED night light for warm, long-life energy efficient illumination (night light must be wired separately)
- Pick-A-Flow™ airflow selector – one fan, you choose the CFM (80 or 110)
- Single-hinged Flex-Z Fast™ bracket provides flexible, fast and easy installation
- Detachable installation adapter provides even greater flexibility
- Low profile housing design fits in 2 x 6 construction
- 4" duct with 3" duct adapter included
- Can be used to comply with ASHRAE 62.2, LEED, Indoor airPlus, California Title 24 and WA Energy Code

LED Lighting

Includes a 10 Watt dimmable LED chip panel/3000 Kelvin Warm White/90 CRI/700 lumens/70 LPW/ENERGY STAR® 2.2 certified/JA8 compliant for CA Title 24/50,000 hours rated average life / <1W LED night light.

Intelli-Balance 100 video

Cost Effective, Code Compliant ERV for Any Climate Zone

Ideal for tight single family homes and multi-family units, the Intelli-Balance 100 is a customizable, high performance, high efficiency Energy Recovery Ventilator (ERV) that's designed to help you meet ASHRAE 62.2 requirements. This unique and cost effective ERV was engineered for total versatility and installation flexibility, in any climate zone.

The Panasonic Intelli-Balance 100 ERV is designed to run continuously at a low CFM setting to exhaust stale air, moisture, and indoor pollutants, while bringing in clean, tempered air from outside. Homeowners and tenants will enjoy a healthier and cleaner home; while builders and installers comply with the industry's most stringent codes, including the Department of Energy's Zero Net Energy Ready program, all Energy Star for Homes programs, Indoor airPLUS, LEED for Homes and CALGreen.

Intelli-Balance 100 can be installed in a ceiling or on a wall, making it ideal for apartments where tenants may not run the air conditioner or bath exhaust fans on a regular basis. The Intelli-Balance 100 ERV allows for regular air exchange which decreases the potential for maintenance or major renovation issues due to humid, stale air. Intelli-Balance 100 does not require connection to the central HVAC or the addition of a condensate line. As a result, installation and routine maintenance is hassle free making this ERV an even more value-driven, cost-effective choice.

Balanced Ventilation: Tightly built homes and buildings utilizing exhaust only fans can create negative pressure. Intelli-Balance 100 solves this by supplying air to replace exhausted air, helping to balance air pressure within the home. By coupling a balanced approach with an energy recovery or heat recovery ventilator (H/ERV), incoming air can be conditioned and dehumidified, saving on heating and cooling expenses for the home.

Built-in Controls: Built-in controls like a Pick-A-Flow™ airflow selector switch (50 to 100 CFM) and ASHRAE timing function help minimize the time it takes to determine desired airflow, verify and maintain performance and ensure code compliance. Intelli-Balance 100 allows you to simply design and specify your ventilation system requirements, improve IAQ and reduce ventilation costs.

Exchange Capillary Core: Intelli-Balance 100's unique and patented capillary core is made from a paper-like material that allows the airstream of inside air to pass right next to airstreams of outside air. The airstreams don't touch each other or mix but the core design allows heat and moisture to transfer to the other airstream. In winter, heat is transferred from the warm outgoing air to the cooler incoming air. In summer, heat is extracted from the warm incoming air and transferred to the cool outgoing air. The result is better air quality and lower energy bills.

ECM Motor Technology: Intelli-Balance 100 uses two (2) ECM brushless motors with built-in SmartFlow™ technology. When the ERV senses static pressure, its speed is automatically increased to ensure optimal CFM output; regardless of a complicated duct run. This feature provides peace of mind, as the installer doesn't have to worry about compromising the ERV's performance.

Filters and Maintenance: Easy access panel allows for quick and easy product maintenance and filter checks. Intelli-Balance 100 has two filters that clean the exhaust and supply air before passing through the ERV core, extending the life of the core. Intelli-Balance 100 comes equipped with a MERV 8 filter that can easily be upgraded to a MERV 13. Convenient light and sound indicators signal when it's time to clean the filters using the soft brush attachment of a vacuum.

Intelli-Balance™ 100

Built-In Controls

| Cost Effective, Code Compliant ERV for Any Climate Zone

Intelli-Balance 100 Key Benefits:

- Engineered for use in any North America Climate Zone
- Two (2) revolutionary ECM motors with Smart Flow™ technology ensure optimum CFM output
- Pick-A-Flow™ airflow selector (50 to 100 CFM) provides customizable airflow to create balanced, positive or negative pressure within the home
- Exclusive built-in ASHRAE 62.2 timing function helps ensure code compliance
- MERV 8 filter included; optional MERV 8 and MERV 13 replacements available
- High efficiency exchange capillary core recovers heat and moisture
- Total Recovery Efficiency: FV-10VEC1 = 65; FV-10VE1 = 73
- Connect to existing ductwork or use as a standalone, whole-house ventilation solution
- Wall or ceiling mount capability
- Can be used to meet green building code requirements and helps minimize the impact to your HERS index
- Model FV-10VEC1 meets Ontario, ENERGY STAR® and Novoclimat requirements**

*Highest CFM rating for supply and exhaust at 0.4 static pressure

** Meets strict energy efficiency guidelines set by Natural Resources Canada and is ENERGY STAR® certified for the Canadian market only.

WhisperComfort™ VENTILATION FAN

FV-04VE1 40/20 CFM or 20/10 CFM Two 4" Ducts

7-7/8"
Depth

| Low Cost and Easy to Install Balanced Air Solution

WhisperComfort Key Benefits:

- ERV balances air pressure by supplying fresh exterior air while exhausting stale interior air
- Low-rate continuous ventilation ideal for multi-family dwellings
- UL listed for ceiling or wall mount, making it ideal for multi-family applications
- MERV 6 supply filter and damper employed
- Exchange capillary core recovers temperature and moisture
- Dual setting air volume for 40/20 or 20/10 CFM
- Ideal for new air-tight houses built to meet energy-efficiency standards
- Compact size fits in walls and ceilings, and 2 x 8 construction
- Sensible Energy Recovery 66%
- Latent Energy Recovery 32%
- Does not require a condensate line or drain
- Can be used to comply with ASHRAE 62.2, LEED, Indoor airPlus, CALGreen, California Title 24 and WA Energy Code

WhisperWarm/Warm Lite Key Benefits:

- Durable 1400W stainless steel sheathed heating element
- Totally enclosed condenser motor for long life – rated 30,000 hours continuous run
- Thermal fuse protection on motor and 3-level safety device for heater
- Quick 1 minute warm-up
- Light option includes (2) 13W self ballasted GU24 base CFL lamps and a 4W night light
- Minimum 20 Amp dedicated circuit required
- For optimum performance, install heater no more than 8 feet from floor to ceiling
- Fits in 2 x 8 construction

WhisperFreshSelect™
VENTILATION FAN

FV-15NLFS1 50-60-70-80-90-100-110-130-150 CFM 6" Duct

HEALTHY AIR, HEALTHY HOME

HVI-certified True Flow ratings at 0.4" static pressure provide powerful CFM output to assure code compliant, healthy homes.*

[see page 69 for PQ curves]

FV-15NLFS1

CFM

Can be selected for 50/60/70/80/90/100/110/130/150 CFM (9 settings).

Humidity Setting

Customizable fresh air supply based on humidity conditions of incoming air.

Temperature Setting

Customizable low temperature setting will shut fan off when incoming supply air is too cold.

Reset Button

Resets every time customer changes filter.

WhisperFresh Select Key Benefits:

- Customizable fresh air supply fan featuring Pick-A-Flow™ technology – one fan, you choose the CFM (50-150 CFM, in 10 CFM increments)
- Operates as a stand-alone filtered supply fresh air solution to meet ASHRAE 62.2 requirements for make-up/supply air
- Capable of communicating with Panasonic's acclaimed WhisperGreen® Select™ to create a balanced ventilation solution
- Incorporates adjustable high humidity and low temperature dials for easy adjustments in any climate zone
- HVI certified for use with MERV 8 and MERV 13 filters. MERV 8 filter included, MERV 8 and MERV 13 replacements available
- HVI certified performance with MERV 13 filter installed
- Can be used to comply with ASHRAE 62.2, LEED and CA Title 24

*Industry research indicates static pressure in typical installations ranges from 0.20" to 0.375".

4" Double Inlet

Recessed Inlet™ | Design Solution for Exhaust or Supply Inlets

FV-NLF46RES 4" or 6" Duct

New! More energy efficient
8 Watt lamp!

Recessed Inlet Key Benefits:

- **New!** Includes (1) replaceable, 8W ENERGY STAR 2.0 certified, GU24 base LED lamp, JA-8 compliant for CA Title 24 and Title 20
- Multi-purpose exhaust or supply recessed inlet is ideal for use with remote mount in-line fans and H/ERVs
- Can be used as a light only option matching the WhisperRecessed LED™ fan with a dimmable LED light
- Incorporates an architectural grade recessed can light design
- Beautiful lighting with 6" aperture and advanced luminaire design
- IC rated

**NEW!
LED Lamp**

INCLUDED: (1) 8 Watt GU24 base
LED lamp /2700 Kelvin Warm
White/>92CRI/720 lumens/90 LPW/
ENERGY STAR 2.0 certified, JA-8
compliant for CA Title 24 and Title 20,
25,000 rated average life.

On/Off/Light—

FV-WCCS2-W (White),
FV-WCCS2-A (Light Almond)

FV-WCCS1-W

FV-WCCS2-A

Condensation Sensor Plus Key Benefits:

- Intelligent and advanced sensor technology monitors humidity and temperature to anticipate dew point, automatically operating the fan to control moisture
- Automatic seasonal adaptability with optional Moisture Sensitivity Selector allows fine tuning for dry or moist environments
- Adjustable Minutes Per Hour (MPH) Fan Timer ensures consistent and controlled ventilation throughout the day for compliance with ASHRAE 62.2
- Automatic Fan Control – 30 minute countdown timer initiates after moisture returns to normal levels
- Manual Fan Control – 20 minute countdown timer initiates once fan is turned on
- Blue LED indicates when the fan is on
- Commercial Grade – 8 Amp max load, 2 year limited warranty
- Engineered to efficiently control current LED lighting and DC motor loads
- For indoor use. Includes matching wall plate
- Can be used to comply with ASHRAE 62.2, LEED, ENERGY STAR® 3.0 and CALGreen

Moisture Sensitivity Selector Settings

-  **High Sensitivity** – Setting the Condensation Sensor Plus to it's most sensitive setting covers the widest range of humidity. This is a setting for dryer climates and/or larger rooms. In a very dry environment, higher sensitivity is needed.
-  **Average Sensitivity** – The Condensation Sensor Plus comes factory set to this most common setting.
-  **Low Sensitivity** – The least sensitive setting is used in hotter and more humid climates. In a very moist environment, low moisture sensitivity may be needed to avoid excessive fan run-time.

ecoswitch

FV-WCSW11-W (White)
FV-WCSW11-A (Light Almond)

1 Function EcoSwitch Key Benefits:

- Fan On/Off Switch
- Engineered to efficiently control current LED lighting and DC motor loads
- Back and side wiring terminals accept both solid and stranded wire to ease installation
- Full-rated current capacity with fluorescent or resistive loads. Motor capacity is 80% of switch rating
- Fits single gang box / Includes matching wall plate
- Commercial Grade

ecoswitch

FV-WCSW21-W (White)
FV-WCSW21-A (Light Almond)

2 Function EcoSwitch Key Benefits:

- Multi-switch combination devices save space and add convenience
- Engineered to efficiently control current LED lighting and DC motor loads
- Common feed shunted internally to all switches
- Elegant decorator styling provides multiple controls in a single-gang wall box
- Fits single gang box / Includes matching wall plate
- Commercial Grade

ecoswitch

FV-WCSW31-W (White)
FV-WCSW31-A (Light Almond)

FV-WCSW41-W (White only)

Designed for model FV-11VHL2
Heater/Fan/Light/Night-light

4 Function EcoSwitch Key Benefits:

- Single pole/double throw on-off-on top switch, two single pole on-off switches
- Multi-switch combination saves space and adds convenience
- Common feed shunted internally to all switches
- Commercial grade
- Includes matching wall plate
- Elegant styling provides multiple controls in a single-gang wall box
- 2 year limited warranty

SmartExhaust™

Controls

FV-WCPT1-W

Fan/Light Control
Delay Timer
Wall plate not included

SmartExhaust™ Key Benefits:

- Earn LEED and ENERGY STAR® points for enhanced exhaust ventilation
- Replaces both fan and light switches for one easy operation
- Microprocessor technology provides precise ventilation times
- Programmable DELAY and VENTILATION settings
- Excess manual and/or delay operation is subtracted from the next hours programmed ventilation time
- Works with ALL incandescent, CFL, fluorescent and LED lights
- Make standard bath fans ASHRAE 62.2 compliant when used with ASHRAE 62.2 complaint fans

Configuring Ventilation Time

In order to properly set the VENTILATION time on your SmartExhaust™, you will need to know the code required CFM (Cubic Feet Per Minute) for your home and the Fan CFM. Follow this simple equation to calculate the VENTILATION minutes per hour.

$\frac{\text{Code Required Ventilation in CFM}}{\text{Fan CFM}}$		=	Hour Fraction
Hour Fraction	\times	$\frac{60}{\text{Minutes}}$	= Ventilation Settings in Minutes

CFM = Cubic Feet Per Minute

Specifications	FV-WCSW41-W/A
Ground	Grounding
Feature	Single pole / double throw on-off-on top switch, two single pole on-off switches
Individual Switch Amperage	15 Amp
Total Switch Amperage	20 Amp
Voltage	120 Volt
Terminations	Quickwire and wire leads
Standards & Certifications	UL/CSA Listed
Warranty	2 Year Limited

SmartExhaust™ Settings:

VENTILATION setting allows the user to set the number of minutes per hour the fan should run.

DELAY setting allows the user to set the number of minutes the fan should run after the bathroom light has been turned off. This setting provides additional run time for the fan to complete the remaining necessary ventilation after use. **SmartExhaust™** replaces an existing switch, there are no additional labor costs required for installation. Simple and economical fan and light operation is provided by one switch.

Example

The SmartExhaust™ has a microprocessor in it that reads the two settings dials. If for example the VENTILATION dial is set to 20 minutes/hour, the microprocessor will subtract 20 minutes from 60 minutes and determines that the SmartExhaust™ needs to come on 40 minutes into the hour and run for the remaining 20 minutes of that hour.

If the DELAY dial is set to 10 minutes and the light/fan switch is manually turned on for 5 minutes, the microprocessor will keep track of the 5 minutes of use. When the switch is turned off after the 5 minutes, the microprocessor will continue to run the fan for the 10 minutes of DELAY setting adding up to a total of 15 minutes. The 15 minutes will be subtracted from the total required 20 minutes of VENTILATION time. 55 minutes into the hour, the fan will turn on and run for the 5 additional minutes needed to complete the required ventilation.

See diagram for more details

A Normal Hour of Operation with no occupancy

The Bathroom is occupied for 5 minutes

EZSoffitVent™

Versatile Soffit Termination System

EZSV14

Ceiling Radiation Damper

PC-RD05C5

EZ Soffit Vent Key Benefits:

- Patented termination system ideal for new residential construction
- First-to-market, HVI-Certified soffit vent helps optimize airflow by letting you complete all ducting before soffit panel install
- Designed to work with ventilation fans up to 110 CFM, using 4" ductwork
- High performance soffit vent improves overall fan performance and reduces call backs due to poor airflow
- Versatile product design can be used for other applications such as: clothes dryer exhaust (as-shipped), fireplace combustion air intake¹, supply only ventilation system intake¹ up to 120 CFM and balanced ventilation systems (HRV/ERV), -exhaust and intake¹ up to 120 CFM
- Simple installation helps reduce total installed costs (callbacks, labor and parts)
- Unique design eliminates water intrusion costs associated with roof and/or wall terminations
- EZ Soffit Vent body snap-fits easily into mounting bracket and can be rotated 180 degrees to align with ducting
- Low resistance backdraft damper eliminates cold drafts and improves blower door test results

EZ Soffit Vent installed

1 - With any use for intake air, you must remove the damper. It's also recommended you add an insect screen (not included).

Radiation Damper Key Benefits:

- One damper for both Combustible and Non-Combustible Assembly Ratings
- Damper allows for two-stage construction; fan housing and damper sleeve during framing, fan/motor/damper installation after finishes
- Damper allows access to fan/motor/damper for maintenance
- Compatible with most Panasonic 10 1/4" 50 – 150 CFM fans, fan lights and fan with motion sensor
- Galvanized steel frame with 165°F fusible link
- High temperature, non-asbestos, reinforced fiber thermal fabric damper

UL Approved for the Following Fan Models:

Damper Model PC-RD05C5

WhisperGreen Select, WhisperCeiling DC, WhisperCeiling 50-150 CFM, WhisperLite, WhisperSense DC, WhisperSense, WhisperSense Lite, WhisperFit EZ, WhisperValue DC, WhisperValue, WhisperValue Lite

–UL and Warnock Hersey 555C classification for 1, 2 or 3 hour Non-Combustible Assemblies

–UL 555C classification for the following 1 hour UL Wood Truss Assembly Ratings: L521, L528, L546, L558, L562, L574, L576, L581, L583, L585, M509, P522, P-533, P-538, P-545 and P-547

Passive Inlet Vent

FV-GKF32S1

Designer Grilles

FV-GL3TDA

FV-GL3TDB

Inlet Vent Key Benefits:

Panasonic Passive Inlet provides make-up air to help balance indoor vs. outdoor air pressure.

- Foam pad reduces outdoor noise and condensation
- Insulation lining to prevent condensation
- Durable ABS and PP resin body
- 7 stainless steel installation screws included
- Sturdy open/close lever
- 2-position air delivery

Recommended Zones Map for WhisperComfort ERV (See page 44-45 for product details)

Operation Season

-  **Zone A: Unit can perform optimally throughout the year.**
 -  **Zone B: Unit can perform optimally March through November.***
 -  **Zone C: Unit can perform optimally April through November.****
 -  **Zone D: Panasonic does not recommend this unit due to extremely cold year-round weather.**

Note: This map is based on average temperature readings over 10 years from 60 major cities in North America. Actual performance may vary depending on annual temperature differences and varying altitudes. Visit www.ashrae.org/technology/page/1330 for the climate zone map adopted by ASHRAE.

*Alternates as balanced or exhaust only Dec-Feb when temperature is above or below freezing.

**Alternates as balanced or exhaust only Dec-March when temperature is above or below freezing.

Sizing Information and Instructions

Equivalent Duct Length (EDL): The Equivalent Duct Length Table (Figure B) shows you how to calculate the equivalent straight duct length in order to overcome static pressure. The EDL chart helps ensure fan performs as expected under the airflow resistance caused by the listed components.

A ventilating fan's performance is plotted on a graph called a performance curve. The performance curve shows airflow in cubic feet per minute (CFM) along the horizontal axis and static pressure (resistance) along the vertical axis. Figure A shows how a performance curve works. The fan with a "Closed Duct" has high static pressure and no airflow; and the fan with "No Duct" has low static pressure and high airflow. In reality, an installed fan will be somewhere in between these two points.

Performance Curves are listed on **pages 66-70**.

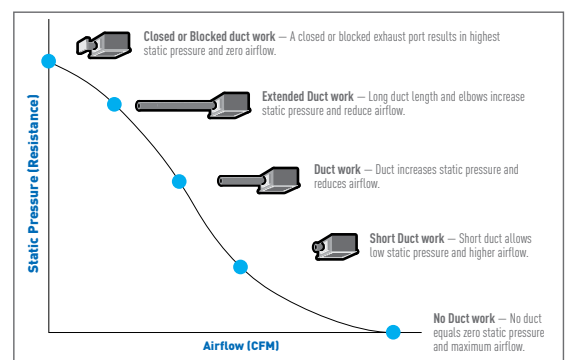

FIG. A

Equivalent Duct Length					
		Duct Diameter			
		3"	4"	6"	8"
Duct	Smooth Metal	Same as measured duct length			
Material	Flex Aluminum	1.25 x duct length	1.25 x duct length	1.5 x duct length	1.5 x duct length
	Insulated Flex	1.5 x duct length	1.5 x duct length	1.75 x duct length	1.75 x duct length
Terminal	Wall Cap	30 feet	30 feet	40 feet	40 feet
Device	Roof Jack	30 feet	30 feet	40 feet	40 feet
Elbow	Adjustable	15 feet	15 feet	20 feet	20 feet

FIG. B

Sizing and selecting a Ceiling Mounted Fan:

Proper sizing requires that you determine the needed CFM, the square footage of the room or home, and the length and type of duct.

Example: Sizing for an 8 ft x 10 ft x 8 ft ceiling bathroom using 12 foot long, 4 inch diameter aluminum flex duct, one elbow, one wall cap.

Step 1: Determine application

Bathroom = 1 CFM/square foot

Step 2: Calculate the area to be ventilated in square feet.

Assuming an 8 ft ceiling: room length x width =
area in square feet

8 ft x 10 ft = 80 sq.ft.

Step 3: Calculate your required CFM

1 CFM x 80 sq.ft. = 80 CFM

Step 4: Use the Equivalent Duct Length chart above to calculate duct run.

4a. 12 ft aluminum flex duct x 1.25 = 15 ft

4b. One elbow = 15 ft EDL

4c. One wall cap = 30 ft EDL

15 ft + 15 ft + 30 ft = 60 ft EDL

This is the equivalent duct length (or resistance) the fan must overcome to move air through the duct to the outside.

Step 5: Review models in catalog pages to find a model with desired feature. Features may include light fixture, heater or low-profile housing.

Note: Check with your local building inspector to confirm that these methods are accepted in your area.

Step 6: Use the EDL calculated in Step 4 to check on the performance curve for the fan selected in Step 5. Performance curves for all Panasonic fans can be found on pages 66-70. Compare your calculated EDL to the curves for different EDLs on the performance curve for your selected product. Where they cross will tell you what airflow to expect. For the 60 feet of EDL in the example, interpolate between the curve for 50 feet and the one for 75 feet.

Ventilation Controls

Selecting a suitable control that runs ventilation at the proper time and duration will ensure that both the occupant's health and building structure are protected.

There are several types of manual and automatic controls that can be applied to ventilation systems. Some controls are more suitable for intermittent or continuous ventilation. Select Panasonic fans incorporate built-in speed, delay and occupancy controls, making them ideal for both intermittent and continuous ventilation. However, note that for Panasonic's multispeed fans we do not recommend the use of any additional controls.

Manual controls: Manual controls require the occupant to activate the ventilation fan when needed. An example of a basic manual control is the Panasonic FV-WCSW21 On/Off rocker switch for light and fan control. There are other controls with functions available that may be more suitable to the occupant's lifestyle.

Manual timers: Electronic timers are more decorative and allow the occupant to select a time duration with the push of a button. Electronic timers do not produce the sometimes annoying ticking sound that crank timers are known for. WhisperGreen® Select™ and WhisperSense fans incorporate quiet electronic controls.

Occupancy (motion) sensors: Occupancy sensors are suitable for intermittent ventilation. An advantage is that the ventilation system will operate without having to rely on the occupant's interaction. The ventilation system will remain "on" and continue working for a duration after the occupant has left the room, much like a delay off timer. WhisperGreen Select fans can be customized to include an occupancy feature with the SmartAction® Motion Sensor Plug 'N Play™ module. WhisperSense fans have occupancy sensors integrated in the fan grille.

Humidity and moisture sensors: Dehumidistats and Condensation Sensors can be used to turn a ventilation system on/off

when relative humidity reaches a certain level. These controls are most likely to be used in bathrooms to evacuate excessive moisture. Dehumidistats have a few disadvantages. One disadvantage is that seasonal changes in outdoor relative humidity necessitate seasonal readjustments to function optimally. Finally, it does not automatically remove odors. The new Panasonic FV-WCCS1 Condensation Sensor Plus features intelligent and advanced sensor technology that monitors humidity and temperature to anticipate dew point, automatically operating the fan to control moisture. It's built-in automatic seasonal adaptability with optional Moisture Sensitivity Selector also allows fine tuning for dry or moist environments. Panasonic's WhisperSense fans include both motion and humidity sensors for ultimate moisture control.

Automatic timers: Automatic timers operate fans at programmed times throughout the day. Typically a 24-hour programmable timer is used to run a fan in morning and evening hours when there is a high demand for ventilation. For continuous ventilation, the control can be programmed to operate throughout the day to help evacuate any accumulation of VOCs or other indoor air pollutants.

Controls can also be used in combination with each other to provide both intermittent and continuous ventilation. For example, a programmable timer may be used to cycle the fan on and off throughout the day to address overall indoor air quality. WhisperGreen Select fans with multi-speed capability, either pre-installed in or through the Plug 'N Play module, have been designed as an ideal double-duty fan providing both intermittent and continuous ventilation with an ECM motor activated by built-in speed, delay and occupancy controls. *The key to selecting the right control or combination of controls is to first understand the occupant's lifestyle and ventilation needs. Then select a control that provides proper ventilation with little or no involvement by the occupant.*

ENERGY STAR®	Min.	Max.	Min.	Rated
Specifications	CFMs/Watt	Sones	Warranty	Airflow (0.25 in. w.g.)
Bath Fans – 10 to 89 CFM	1.4	2.0	1 year	60%
Bath Fans – 90 to 130 CFM	2.8	2.0	1 year	70%
Bath Fans – 140 to 500 CFM	2.8	3.0	1 year	70%
In-line Fans	2.8	N/A	1 year	N/A

ENERGY STAR®

www.energystar.gov

The **ENERGY STAR®** program was created by the U.S. Environmental Protection Agency (EPA) and the U.S. Department of Energy (DOE) to help customers identify products that can save them money and protect the environment by saving energy. When it comes to ventilation fans, ENERGY STAR® certified products feature super-quiet operation (low sone levels) and high CFM to Watt efficiency. As an ENERGY STAR® Partner of the Year annually from 2010 through 2017, almost all Panasonic ventilating fans exceed ENERGY STAR® standards where guidelines exist and have been labeled accordingly. Panasonic ventilation fans may qualify for an energy saving

rebate. Rebate programs are often provided by local utility companies and based on ENERGY STAR® guidelines. Check with your local utility company or state ENERGY STAR® Homes Program for details.

Panasonic WhisperGreen Select, WhisperSense DC, WhisperCeiling DC and WhisperValue DC have also been awarded ENERGY STAR®'s 2019 Most Efficient. This distinguished award recognizes these models as being some of the most energy efficient among those that qualify for ENERGY STAR®.

Home Ventilating Institute

www.hvi.org

All Panasonic ventilation fans are tested and certified by the Home Ventilating Institute (HVI). The HVI label is your assurance that the certified airflow and sound rating of Panasonic ventilation fans are the results of testing by an independent laboratory.

HVI is a non-profit association comprised of manufacturers of home ventilation products. HVI offers a variety of services including, but not limited to, test standards, certification programs for airflow, sound and energy performance. For more information about HVI contact:

Installation

A practical guide to Panasonic fan installation

Proper fan installation is necessary to optimize performance. The following points outline installation techniques to help achieve optimum performance.

IMPORTANT: In order to reduce elbows and optimize fan performance, install the fan with the exhaust port pointed in the direction of the termination point. Be sure to use the duct diameter size specified for the selected fan. Reducing the duct diameter (at any point in the duct run) will create substantial static pressure and reduce the fan's performance by as much as 90%. Increasing the duct size almost always improves both sound and airflow performance.

Selecting Duct: A smooth surface duct allows for optimum airflow. See Figure C. For best results, use galvanized sheet metal or possibly PVC. Flexible aluminum duct is durable, easy to install and often used. However, the ridges in aluminum flexible duct increase static pressure and can reduce airflow and fan performance. This results in lower CFMs, higher noise levels and higher energy consumption. The degree to which performance is affected depends on the length of duct, number and degree of elbows.

Sagging or weaving a fan duct will also increase static pressure and reduce a fan's performance. When using a flexible aluminum duct, support the entire length of the duct with braces or hangers to keep it as straight as possible for the entire run. If the duct lies across the attic, do not allow it to sag between each joist. Also, avoid weaving duct through trusses.

Using dryer duct connectors made of nylon or vinyl is not recommended due to high static pressure caused by its ridges and curvature. Insulated flexible duct must be fully extended to avoid added resistance.

Elbows: Rule number one is to avoid elbows and bends whenever possible. However, the fact is that many installations require at least one elbow, as shown in Figure D. There are two precautions you can take when installing elbows to achieve optimum airflow.

First, allow a 2-3 foot straight run out of the fan before the first elbow. This allows airflow to be uniform before passing through the first elbow. An installation that has a 90-degree elbow immediately after the fan exhaust port will cause air to flow back into the fan. This will reduce fan performance and increase noise. (Figure D)

FIG. D

Second, use a long radius angle, as shown in Figure E, to help ensure optimum airflow and minimum airflow noise.

FIG. E

The shortest, smooth inner surface duct with the least number of elbows will provide optimum fan airflow

Troubleshooting Advice:

1. During fan installation, the tape on the duct connector holding the damper shut must be removed.
2. Confirm with your contractor if screws were used to attach the duct to the fan. The damper may not open if obstructed by screws.
3. Check that the backdraft dampers on wall caps and roof jacks are able to move freely. Routine inspections are recommended as birds and other pests may inhabit these areas.
4. Ductwork must be connected securely to wall caps and roof jacks.

FIG. C

*A straight run over joists is better than the duct 'dipping' into each joist bay which will increase static pressure and, eventually, deposit water in the 'dips'.

FIG. F

Note: If duct is in the attic, to avoid possible condensation problems, be sure it is either under loose fill insulation or it is fully insulated to minimum of R-6 with duct wrap.

FIG. G

Green Building Programs & Green FAQs

Green Building Programs

Green building is the practice of increasing energy efficiency and health for people and their environment. Effective green building can reduce operating costs through less energy consumption; improve occupant health by enhancing indoor air quality and lessening the impact on the environment.

ASHRAE 62.2-2010 and 2013

There are several green building programs within the United States and nearly all adhere to the standards set by the American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE) for the HVAC industry. ASHRAE Standard 62.2 is the national ventilation standard of design for low-rise and mid-rise multi-family buildings. 62.2 requires continuous mechanical ventilation for the entire house to be 7.5 CFM per person (master bedroom x 2) plus 1 CFM per 100 sq.ft. with some level not to exceed 1.0. Panasonic's full line of ventilation fans including WhisperGreen® Select™ and

WhisperComfort are affordable and are an efficient way to meet this ventilation standard.

USGBC and LEED for Homes

The US Green Building Council (USGBC www.usgbc.org) offers the Leadership in Energy and Environmental Design (LEED) program for commercial buildings and the LEED for Homes program for residential buildings. USGB does not offer specific product certification, but LEED for Homes requires using mechanical ventilation to meet ASHRAE Standard 62.1 for commercial projects or 62.2 for residential projects.

ENERGY STAR® Homes Program

The US Environmental Protection Agency (EPA) manages the ENERGY STAR® Homes Program. This program offers certification of the home as energy efficient based on an evaluation of energy use and construction features. Both the ENERGY STAR® Homes program and the Indoor airPLUS (IAP) require meeting ASHRAE Standard 62.2 – 2010.

California Title 24

As the required code for California Title 24 is the shorthand name for the Building Energy Efficiency Standards for Residential and Non-Residential Buildings. Developed by the California Energy Commission and first published in 1978, the standards were recently updated for 2012 and will be effective in 2014, including the requirement to meet ASHRAE Standard 62.2.

National Association of Home Builders (NAHB) Green Building Standard

A voluntary standard developed by NAHB to provide a design guide and rating system for houses. Similar to ENERGY STAR® for Homes program but less stringent, it has both required and optional measures that can give a house a third-party certification. This program does not require meeting the ASHRAE 62.2 Standard though it can be worth 'points' in the program. However, most Local Codes require meeting some level of indoor mechanical ventilation, usually that means meeting ASHRAE 62.2. The more options utilized such as fulfilling ASHRAE 62.2 provides a higher rating.

2010 Required Continuous Ventilation Rate (CFM)

Floor Area	0-1 BR	2-3 BR	4-5 BR	6-7 BR	>7 BR
<1500	30	45	60	75	90
1501-3000	45	60	75	90	105
3001-4500	60	75	90	105	120
4501-6000	75	90	105	120	135
6001-7500	90	105	120	135	150
>7500	105	120	135	150	165

2010 Sizing Example (based on ASHRAE 62.2):

Two Bedrooms at 1600 sq.ft.

Master Bedroom (7.5 CFM x 2)	=	15.0 CFM
Second Bedroom	=	7.5 CFM
1600 sq.ft. x 0.01	=	16.0 CFM

Total 38.5 CFM

To comply with ASHRAE 62.2, a WhisperGreen Select FV-05-11VKS2 set at 40 CFM provides the ideal solution. Or to keep air pressure balanced inside the home, WhisperComfort provides supply air and complies with 62.2 by setting the exhaust fan at 40 CFM. For larger homes or whole house ventilation, a combination of WhisperComfort and/or WhisperGreen Select continuous ventilation fans can be utilized to fulfill the standards set by ASHRAE 62.2.

2013/2016 Required Continuous Ventilation Rate (CFM)

Floor Area	1	2	3	4	>5
<500	30	40	45	55	60
500-1000	45	55	60	70	75
1001-1500	60	70	75	85	90
1501-2000	75	85	90	100	105
2001-2500	90	100	105	115	120
2501-3000	105	115	120	130	135
3001-3500	120	130	135	145	150
>3501	135	145	150	160	165

2013/2016 Sizing Example (based on ASHRAE 62.2):

Two Bedrooms at 1600 sq.ft.

Master Bedroom (7.5 CFM x 3)	=	22.5 CFM
Second Bedroom	=	7.5 CFM
1600 sq.ft. x 0.03	=	48.0 CFM

Total 70.5 CFM

The 2013/2016 edition of 62.2 increases that calculation to 3 CFM per 100 sq.ft. In areas where 62.2-2013 has been adopted, multifamily units must use that higher rate but single family homes can deduct the calculated leakage rate obtained by a blower door test.

Green FAQs

Programs like LEED for Homes and ENERGY STAR®, all require various levels of insulation, use of renewable building and finishing products. They also require compliance with the ventilation requirements of 62.2. ASHRAE 62.2 allows the designer or builder to choose the method that fits their project, climate, or budget. It only sets the whole house continuous rate and provides guidance on how to increase the flow to allow for intermittent operation. Essentially, the higher rate is the reciprocal of the run time. If it operates one-third of the time, it must be increased to three times the continuous rate in the table, but it still cannot exceed 3.0 sones. The easiest way to meet the requirements is to use a WhisperGreen Select fan operating continuously. Most of the single speed Panasonic fans under 1.0 sone can be used to meet 62.2, but the rated flow at 0.25 inches of water gauge must meet the required flow. ASHRAE 62.2-2013 and many local programs require field measurement of the airflow. So WhisperGreen Select with either pre-installed multi-speed or with the multi-speed Plug 'N Play module is the preferred choice.

Where is my make-up air coming from if the house is airtight?

All houses leak to some extent. ASHRAE 62.2 assumes an average new construction tightness level that is based on national testing and that will allow some leakage. Air leaks in (if exhausting) or out (if supplying) of the house when the fan operates, through the cracks and holes in the building between building materials, around windows and doors, and through utility penetrations. Ideally, the house will be 'tight' and not have much infiltration but will have mechanical exhaust and supply so the air can be 'controlled' by the occupant.

While not required by 62.2, through-the-wall inlets from Panasonic and others can be installed to ensure some of the leakage happens through those inlets.

Am I creating a negative pressure when exhausting air all the time?

The low exhaust rates required by 62.2 will seldom create enough negative pressure to cause a combustion device to backdraft. High flow fans, such as large range hoods and clothes dryers, can create enough negative pressure to create a backdraft if natural draft combustion devices are used in a tight house. Building Performance Institute (BPI) sets a limit based on the potential for backdrafting of combustion appliances may occur within the home.

What makes a WhisperGreen Select fan a Green product?

The Green concept is a combination of energy efficiency, sustainability, improved interior environment (IAQ), and operating cost. The 'green' of WhisperGreen Select is the energy efficiency, low noise and long term warranty which means the fan will be running for very little cost for a very long time to insure the occupants live in a healthier indoor environment.

If the fan is running all day, aren't I wasting electricity?

The WhisperGreen Select fan features an ECM motor, which makes very efficient use of electricity. Your fan, operating at 50 CFM continuously, uses 6.6 Watts of electricity. Using the national average kWh rate of \$.1105, it costs \$6.39 per year to have a fan that provides indoor air quality.

What does the SmartAction® motion sensor Plug 'N Play module plugged into WhisperGreen Select models do?

When the SmartAction® motion sensor Plug 'N Play module senses motion, or

when the switch is turned on, the fan boosts from its low, continuous ventilation speed to its high "spot" ventilation speed. The WhisperGreen Select fan has a high speed of 50-80-110 or 110-130-150 Cubic Feet per Minute. When the fan is in this mode it is operating as a traditional bathroom exhaust fan.

When I turn my switch to the "on" position or when the motion sensor is blinking green, I don't hear a big boost in speed.

Another feature of the WhisperGreen Select fan is "SmartFlow" technology. Static pressure, the resistance that lies within the duct system and point of exhaust, can severely inhibit a standard bath fan's performance. For example, a fan designed to deliver 50 CFM of airflow at 0.1 inch of pressure might only be operating at 31 CFM due to high static pressure. "Smart Flow" technology allows the ECM fan motor to react to higher static pressure situations so that when the fan is set at 50 CFM, you get 50 CFM. When the motion sensor "sees" movement or the boost switch is turned on, the fan slowly boosts to the 80 CFM or 130 CFM maximum airflow, so you may not hear a big increase in noise.

When I turn the switch to the "off" position or when the motion sensor Plug 'N Play module is not in use, why doesn't the fan slow down right away?

Each WhisperGreen Select Plug 'N Play module activates a 20 minute fan features a delay-low timer when plugged in. This allows the fan to operate at the higher speed for a longer time to help remove excess moisture from the bathroom, after a shower.

FAQs

Frequently Asked Questions

1. What is a sone?

A sone is an internationally recognized measurement of sound output. The smaller the sone, the more quiet it is. Likewise, the higher the sone, the louder the sound. According to HVI, one sone is equivalent to the sound of a quiet refrigerator.

2. What is CFM?

CFM, or Cubic Feet per Minute is a measurement of rate of airflow. The larger the CFM, the more powerful the fan.

3. What is static pressure?

Static pressure is a measure of the resistance against flow as the fan pushes air through a duct. Static pressure is measured in inches of water column or water gauge (w.g). It is expressed as 0.1" w.g. or 0.25" w.g. to show that the resistance is equal to a column of water one-tenth or one-quarter of an inch tall. Most bath fans sold in North America are rated and certified at 0.1" w.g. by the Home Ventilating Institute (HVI).

4. Why are Panasonic Fans so quiet?

Tip Speed.

Fan noise comes from the amount of the blower wheel blade tip speed – the tip speed is in proportion to the revolutions per minute (RPM) of the wheel or fan blade. A small wheel turning very fast will create more noise than a large wheel turning more slowly for a given airflow. Panasonic fans use a compact blower wheel with aero dynamic blades that moves a large amount of air at reduced RPMs. The Panasonic blower wheel is designed more efficiently than most competitor models, so it turns at lower RPMs, reducing tip speed and noise.

Quiet Motor.

Panasonic is the first ventilation fan manufacturer to incorporate an ECM motor in residential mechanical ventilation fans. Panasonic WhisperGreen Select series features a removable, permanently lubricated, plug-in ECM motor. The totally enclosed ECM motor brushless motor technology is rated for continuous run and are designed for extremely quiet, energy efficient operation. Panasonic ECM motor motors consume 30% less energy than AC motors and each one comes equipped with a thermal cutoff fuse for added protection and safety.

All other Panasonic fan series incorporate a totally enclosed four-pole condenser AC motor, which is an advanced version of a Permanent Split Capacitor (PSC) motor. These are among the most energy efficient fan motors made. The four-pole design helps the fan to rotate smoothly and evenly due to a more stable electrical field that keeps the fan shaft turning more evenly than shaded-pole motors used in mid-range fans or C-frame motors used in inexpensive fans.

5. What makes Panasonic Fans so highly energy efficient?

The input wattage readings on the Panasonic fans are among the lowest in the industry. This means that for a given airflow, Panasonic fans will use fewer kilowatt hours and cost less to operate than other fans. This lower wattage draw is accomplished in a number of ways:

FIG. 1

Unique Motor Design.

Panasonic's ECM brushless motor provides unparalleled energy efficiency with its magnetic rotor and printed circuit board. The magnetic rotor prevents energy loss while standard AC motors that utilize aluminum die cast rotors expend energy. Also, Panasonic's ECM motor is the only one to incorporate a print circuit board containing a unique IC chip which monitors and directs the RPM of the fan blade. The combination of these two unique features allows the ECM motor to have higher energy efficiency than an AC motor.

Panasonic uses a four-pole condenser motor, which is composed on a main coil and a sub coil. The coils in a motor are essentially small electromagnets that are turned on and off to create an electrical field to "pull" the fan shaft around, making the fan blower wheel turn. The condenser is connected with the sub coil, which helps with rotation. The condenser acts like a capacitor to store electrical energy and deliver it quickly and in exact amounts to the coil. This improves the electrical efficiency of the motor and reduces power draw.

Selective Application.

Panasonic builds its own motors and components, which means tight control over quality. Panasonic engineers also optimize efficiency by matching the exact motor characteristics with the desired performance of the fans.

6. Why do Panasonic Fans have such a long life?

Panasonic fans are designed to give the consumer trouble-free continuous operation for many years. These fans utilize high quality components and permanently lubricated motors. This leads to fans that provide a

long operational life because their components wear very slowly. That is why Panasonic stands behind its products with one of the longest warranty periods in the industry.

Motor Production.

Panasonic motor production is fully automated, with an automatic defect detecting system. The quality assurance program is exemplary, leading to a defect rate of less than 0.0006%.

ISO 9001 and ISO 14001 plant.

The production facilities that build Panasonic fans have earned the distinction of being recognized by the International Standards Organization (ISO) under the ISO 9001 and 14001 Quality Assurance program. Meeting ISO 9001 and 14001 means that these factories have met the highest quality standards in the world.

Fan Housing.

The fan housing is made of heavy-gauge zinc-galvanized steel and painted to protect it from rust. Built-in metal flange provides blocking for penetrations through drywall as an air barrier, and assists with the decrease in leakage in the building envelope during blower door testing.

7. Can insulation material be used over fans installed in the ceiling?

YES. Loose fill or batt insulation can be placed directly over the fan housing in the attic. Panasonic fans and fan/light combination units do not create excessive heat that is a common problem with recessed light fixtures or some competitors' fan/light combinations. Our efficient, cool-running motors and our fluorescent bulbs do not create enough ambient heat to be subject to these limitations.

8. Can a Panasonic fan be used over a bathtub and in showers?

YES. All Panasonic fans, with the exception of heater and Spot ERV models, are listed by Underwriters Laboratories for installation over tubs and showers, provided they are protected by a Ground Fault Circuit Interrupter (GFCI). GFCI is mandated by the National Electrical Code. While not specifically listed by UL as an application, the fan can also be installed in a steam shower enclosure. Keep in mind, however, that any ventilation device located in a damp environment such as a shower enclosure may have a reduced life due to the high humidity and potential for corrosion. Fans installed in a high humidity environment should be operated for longer periods of time to ensure the removal of the moisture and to reduce the potential for condensation in the fan body or ducting.

9. Can a Panasonic fan be used above a kitchen range?

No. Panasonic fans are not currently rated by UL for above-range installation since it was not designed to handle both grease and high temperature. However, Panasonic fans can be used to provide auxiliary kitchen ventilation. An approach that works well in large kitchens is to use a ducted range hood or downdraft exhaust and a Panasonic ventilation fan to exhaust the general odors and moisture in the greater kitchen area.

10. Why are Panasonic fans not required to be IC rated?

Fans are not required by UL to be IC (Insulation Contact) rated because they do not have high temperature sources like recessed can lights. The Panasonic fan/light combo units use fluorescent lamps that are mounted in a light kit

that is considered to be surface mounted, so they do not create high temperatures within the fan housing that would require an IC rating.

11. What's better, a motion sensor or humidity sensor?

While the humidity sensor checks the amount of moisture at the ceiling, a motion sensor "sees" the occupant coming into the room. The humidity sensor has to be set to either Rate of Rise or Relative Humidity. Depending on how the fan is set up, it may or may not turn on in certain conditions. For instance, if set for Rate of Rise (how quickly moisture builds up in a room), it might not turn on at all when there is a slow, steady build up of humidity over time. On the other hand, a motion sensor will go on once it senses motion to capture both moisture, odors and contaminants from the cleaners and chemicals that may be kept underneath the sink. Panasonic's WhisperSense fans include both motion and humidity sensors for ultimate moisture control.

"Panasonic's Condensation Sensor Plus is a more sensitive way to control a fan to avoid condensation because it measures both relative humidity and air temperature."
